

Message from Ms. Fumiko Kometani

68 years has passed since Atomic Bomb dropped on Hiroshima. At that time people everywhere vowed we would never again allow for another nuclear calamity. Yet within 10 years many government were manufacturing even more dangerous, destructive nuclear arms .

And Pres. Eisenhower, with the slogan {Nuclear for Peace}, was promoting the building of nuclear reactors to produce electricity.

This proved dangerous. But many nations built Nuclear reactors and now we have more than 400 units all over the world.

The people who had power to promote and decide to build these dangerous reactors were almost all men. But if half of the decision makers had been women - - mothers, daughters, sisters - who know genetically the terrible result involved in the use of nuclear power – I do not think this situation would have come to pass.

Possible accidents and the difficulties in cleaning up afterwards to prevent the radiation and contamination were never considered. There were no such discussions. There only the discussions involved were the sums of money.

How much the leading electric companies and the top construction companies could make.

And how much it could cost to brainwash the residents near the construction sites. reactors . Journalists and government officials, academic scholars and nuclear scientists were all complicit in this effort.

But now Mothers, Daughters, Sisters! we must fight to stop the expanding of these catastrophic breeding systems and to shut them down all over the world.

We must eliminate nuclear weapons. We must disband nuclear plants. We must teach our leaders to realize that neither they nor their families and loved ones, are immune to the danger of radiation . That air circulates everywhere, all around the Earth. That anyone who breathes air is endangered. That we are all endangered.

Do you want another Chelynobyte? Another Fukushima? Another Hiroshima and another Nagasaki to the 400th power?

Don't let the authorities lie and give us misleading information about the possibilities of such calamities.

Think seriously . Act immediately. Assume a responsibility for your own future.
